

MANUFACTURING

Elanco are an American company who manufacture and distribute animal health pharmaceuticals in their Wiri facility.

Elanco NZ wanted to realise improvements in health and safety system highlighted from an audit by its parent company, against its corporate standards.

Winsland was asked to develop a logical plan for addressing the gaps and to guide the local manufacturing and warehousing organisation through making the necessary changes.

Among the work undertaken, Winsland:

- Revised the **site induction**
- Developed a new site *Traffic Management plan*
- Developed a fresh set of **emergency procedures**
- Reviewed and revised **warehouse procedures**, including those relating to use of mobile plant.
- Developed procedures for **driving risk** and the risk of staff **working remotely** on farms and with animals.

The result was the plan was delivered, and the Elanco NZ met all the corporate standards, with a consequent improvement in what was already a very high standard of health and safety performance.
